1. During the latter part of April [] Dr. Wilhelm Grimm, head of the Department for the Construction of Small Transmitters in Area (Bereich) II of Funkwerk Koepenick, received an order for the development of a special receiving set which is to combine the properties of several receiver sets so far used individually. The name of the device is "Kreuzstationsempfänger." Funds amounting to 140,000 ML were made available for the execution of this development order, which was assigned to Funkwerk Koepenick by VLB Funkanlagen.
2. The receiving set is to combine the following instruments in one:
 - a. Single side band receiver
 - b. Commercial receiver to be used by the Post, police and armed forces^{1/}
 - c. TUSA receiver
 - d. Diversity receiver
 - e. All-wave receiver

The development is to be carried out in such a way that the instruments enumerated above under "a" through "e" can also be used individually. The main emphasis is placed, however, on the development of a combined instrument which can be used for any and all of the above mentioned individual purposes. According to Grimm's provisional estimate, the combined instrument will be about 2.10 meters high, 1.60 meters wide and 0.80 meters thick. Construction of the mechanic-acoustic filters for the instrument has been assigned to Dr. Rudolf Kaiser of the transmitter development section of the works. Each filter will consist of twelve resonators made of invar(iron-nickel alloy) steel.

3. Development of the instrument is to be completed by the end of 1954. The plant directorate plans to sell at least 50 of the instruments to the East German Post and armed forces as soon as actual production is under way.

25X1

- 1/ [] Comment. Commercial receivers are actually for official services, since no private enterprise in East Germany is allowed to use radio communication lines.
